Question 2

```
START
  Function sumofDivisors(x)
      sum ← 0
      for i = 1 to x/2.
        if x mod i = 0
          sum ← sum + 1
        endif.
      end for.
      return sum.
  End Function
  main
    Declare n, a, b, count
    count ← 0
    n ← input.
    print amicable pairs upto n
    for a = 2 to n
        b = sumOfDivisors(a)
        if b > a AND sumofDivisors(b) = a
          print a, b
          count ← count + 1
        End if
  End for
  if count = 0
    print no pairs found
```

Scanned with CamScanner

else

print totalpair; cout.

endif

End main

Stop.

Input:

- An integer n (limit of amicable pairs)

output:

- All amicable pairs found within the given limit.
- A message if no amicable pairs are found.
- total number of amicable pairs.
